INTERNATIONAL SEMINAR

DRIVING SUPPLY CHAIN EXCELLENCE WITH SCOR (SUPPLY CHAIN OPERATIONS REFERENCE)

As global supply chains become more complicated, companies see the need for better collaboration and coordination among entities.

In Indonesia, many organizations struggle to effectively implement supply chain management because there are no guidelines for measuring their supply chain systems and determining what needs to be improved. If this situation persists, the organization will suffer due to its inability to compete in an increasingly competitive market, particularly in meeting client demands.

The Supply Chain Operations Reference Model (SCOR) is the only framework that is complete and widely accepted. SCOR combines business process engineering, leading practices, benchmarking, human resource skills, and numerous metrics into a framework that identifies core process areas that require optimization.

When companies use SCOR as an end-to-end process blueprint, not only do they achieve extraordinary ROI, but also enhance other important indices. Typical results include increased operating income, better return on fixed asset technology investments, faster implementation of digital transformation projects, and lower operational costs.

WEDNESDAY, 12 NOVEMBER 2024

08:00-17:00 | HOTEL DOUBLETREE BY HILTON
KEMAYORAN, JAKARTA

20% DISCOUNT Rp.1.4800.000

16:15 - 16:30	Doorprize
16:30 - 16:40	Closing Remarks

The Supply Chain Operations Reference (SCOR) model describes the business activities associated with all phases involved with satisfying a customer's demand.

SCOR is the only comprehensive, universally accepted and open-access supply chain standard. It has been used by thousands of public and private organizations around the world to assess and improve their supply chains, directly leading to improved operational performance.
